INTRODUCTION

- l'età di accesso delle coppie sia così determinato:
 - età femminile fino al compimento di 50 anni
 - età maschile fino a compimento di 65 anni
- il numero dei cicli sia così determinato:
 - 4 cicli di trattamento di 1° livello nei limiti di dosaggio previsti dalla nota AIFA 74
 - 3 cicli di trattamento di 2° livello (pazienti arrivate ad eseguire il Pick up) nei limiti di dosaggio previsti dalla nota AIFA 74

Circa l'età di accesso per le donne, essa viene determinata come sopra riportato in quanto si ritiene opportuno tener conto dell'aspettativa di vita in crescita, degli sviluppi della ricerca scientifica e quindi dare una maggiore opportunità alle donne.

INTRODUCTION

SCF (STEM CELL FACTOR)

Pleiotropic cytokine with a molecular weight of 25–36 Kd that accomplish an effect on the target cells via the **c-kit** receptor, a tyrosine kinase receptor.

ACTIONS

Data from human experimental studies investigating the expression patterns of SCF and c-kit in the ovary, as well as the actions of SCF on oocytes and theca cells, suggested that SCF may be important for many stages of **follicular development** and **oocytes maturation**

SCF may be a candidate biomarker for the prediction of the success of a controlled ovarian hyperstimulation (COH) before ovulation induction and oocyte pick up?

TO EVALUATE IF THE **SERUM CONCENTRATION OF STEM CELL FACTOR** BEFORE OVULATION INDUCTION MAY BE CONSIDERED A NEW TOOL TO ESTABLISH **WHETHER TO PERFORM FOLLICLE ASPIRATION OR NOT** IN ELDERLY POOR RESPONDERS PATIENTS UNDERGOING IVF CYCLE

TO ACHIEVE THIS EVIDENCE, WE EVALUATED IF **DIFFERENT PROTOCOLS OF OVARIAN STIMULATIONS** MAY SIGNIFICANTLY INFLUENCE FOLLICULAR LEVELS OF SCF AND FURTHER **IF THESE LEVELS MAY REFLECT THOSE OF SERUM**

UNIVERSITÀ
DEGLI STUDI
DI PADOVA

MATERIALS & METHODS

Pilot-observational-cohort study on 37 elderly infertile patients scheduled for IVF treatment at Padua University

Inclusion criteria

43 to 50 years

Estimated poor responders according to biochemical and sonographic features collected during ovarian reserve testing, as suggested by Bologna Criteria

Exclusion criteria

history of smoking within the previous 12 months, deep endometriosis/endometrioma, abnormal karyotype, mutations of the cystic fibrosis gene, acquired or inherited thrombophilia and immunological disorders, previous chemo and/or radio therapy for neoplasia, untreated uterine disease, patients who received low-dose aspirin during treatment and cases in which oocyte retrieval was cancelled due to insufficient ovarian response

S-COH group: Patients were firstly treated by standard-protocol - long-agonist-protocol and recombinant-FSH (starting dose of 300 IU) -

LH-COH group: (in case of treatment failure) patients were secondly treated by LH-protocol within 6 months after previous cycle - different from S-COH only for the rLH supplementation (150 UI starting from the fourth day of rFSH administration).

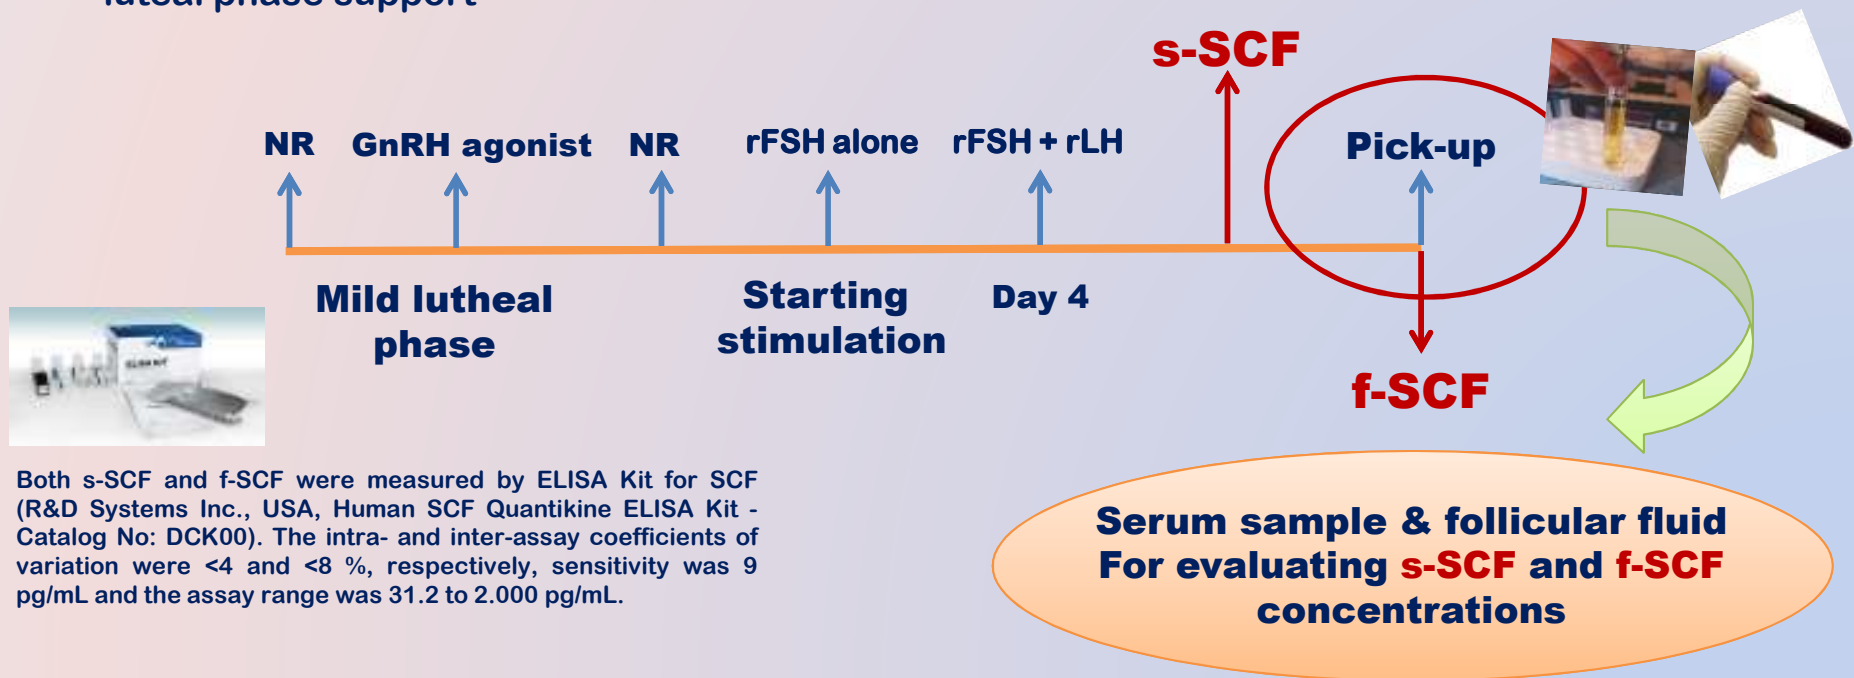

UNIVERSITÀ
DEGLI STUDI
DI PADOVA

MATERIALS & METHODS

- Gonadotropin doses were adjusted according to biochemical and sonographic features of ovarian response beginning from stimulation day 5.
- When at least 3 follicles exceeded 16 mm in diameter (or at least 1 follicle larger than 18 mm) were observed on transvaginal sonography, we administrated **rhCG** 250 for ovulation induction
- All retrieved oocytes were fertilized by ICSI technique
- All patients received high dose progesterone supplementation (600mg vaginally and 100 mg intramuscular for day) in association with valerate E2 (2mg vaginal tablet twice daily) for luteal phase support

Both s-SCF and f-SCF were measured by ELISA Kit for SCF (R&D Systems Inc., USA, Human SCF Quantikine ELISA Kit - Catalog No: DCK00). The intra- and inter-assay coefficients of variation were <4 and <8 %, respectively, sensitivity was 9 pg/mL and the assay range was 31.2 to 2.000 pg/mL.

UNIVERSITÀ
DEGLI STUDI
DI PADOVA

RESULTS

	NUMBER OF PATIENTS	MINIMUM	MAXIMUM	MEAN	STD. DEVIATION
Age	37	44	48	45.32	1.12
Basal FSH	37	7.8	19.1	13.23	3.34
Basal AFC	37	1	7	4.01	2.12
Basal AMH	37	0.1	0.5	0.219	0,12

Table 1. Data regarding patients general features and ovarian reserve test before IVF treatments

135 MII OOCYTES RETRIEVED
FERTILIZATION RATE OF 74.8%
TOTAL 101 EMBRYOS
OF WHICH
38 (37.6%) GRADE 1
45 (44.6%) AS GRADE 2
18 (17.8%) AS GRADE 3

	NUMBER OF PATIENTS	Minimum	Maximum	Mean	Std. Deviation
f-SCF pg/mL	72	153	1068	658.64	232.120
s-SCF pg/mL	72	224	1097	753.39	245.055

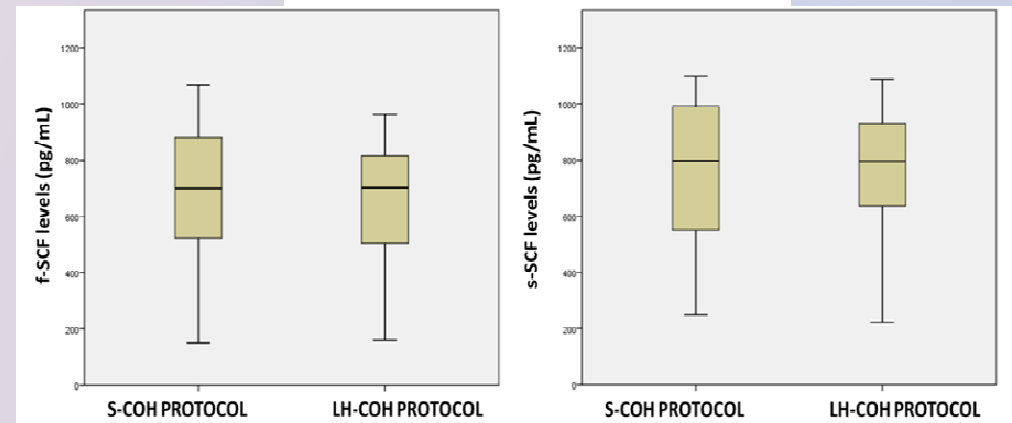

Figure 1. Comparison between S-COH and LH-COH treatments in term of both **f-SCF** and **s-SCF** levels.

UNIVERSITÀ
DEGLI STUDI
DI PADOVA

RESULTS

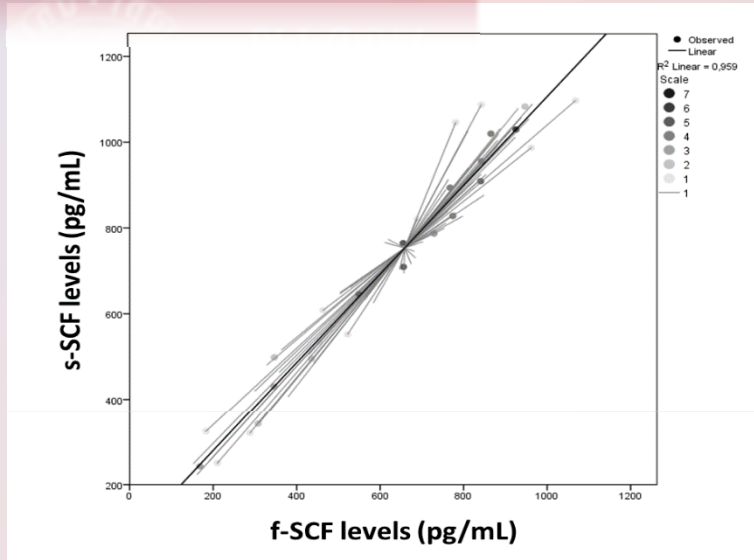

Figure 2. Comparison between **f-SCF** and **s-SCF** levels using a linear correlation (cases were paired using a chromatic grey scale for number of events).

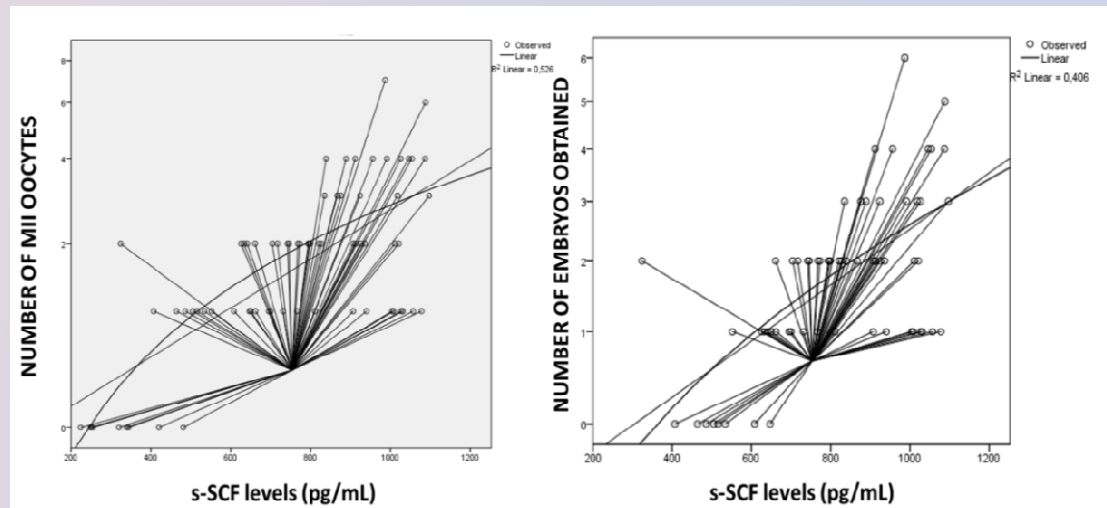

Figure 3. Stratification of MII oocytes retrieved and embryos obtained for **s-SCF** value.

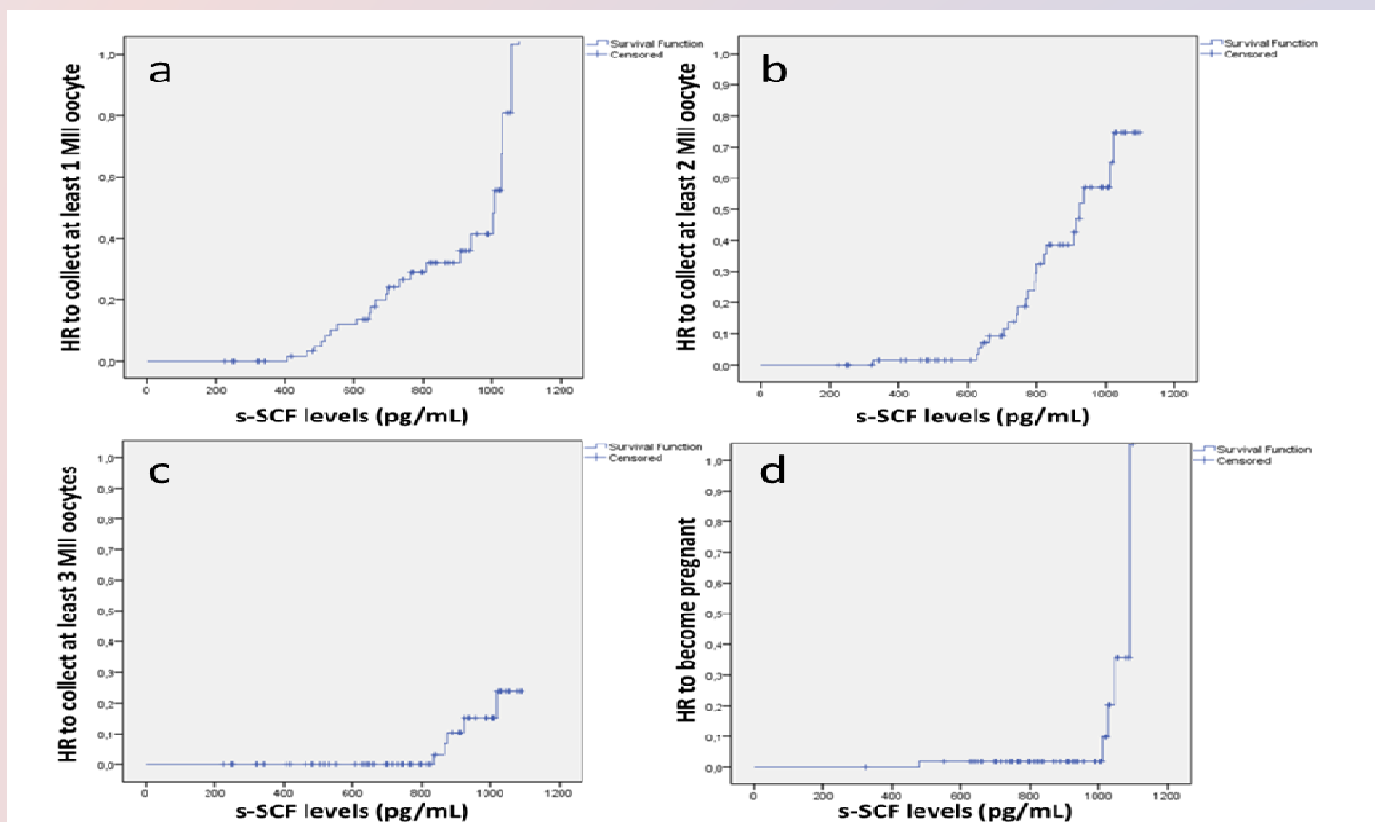

UNIVERSITÀ
DEGLI STUDI
DI PADOVA

RESULTS

Figure 4. Kaplan-Meier estimator curves for the estimation of events of at least 1, (fig 4a) 2 (fig 4b) or 3 (fig 4c) MII oocytes retrieved and pregnancy establishment (fig 4d) (s-SCF levels were used as a time function factors).

UNIVERSITÀ
DEGLI STUDI
DI PADOVA

RESULTS

...TO SUM UP

- S-COH and LH-COH did not show statistical differences in term of **f-SCF** and **s-SCF** concentrations.
- On the contrary **f-SCF** and **s-SCF** levels showed a strong linear correlation. [$p < 0.001$]
- Estimating the chance of collecting MII-oocytes we found that:
 - At least 3 MII-oocytes was collected with **s-SCF** > 800 pg/mL
 - At least 2 MII-oocytes was collected with **s-SCF** > 600 pg/mL
 - At least 1 MII-oocytes was collected with **s-SCF** > 400 pg/mL
 - With **s-SCF** < 400 pg/mL was not recovered MII-oocytes.
- Finally we found that all the 5 obtained pregnancies (6.9% of all treatments and 8.9% of treatments with transfer of at least 1 embryo) occurred in patients with **s-SCF** values > 1000 pg/mL at pick-up.

UNIVERSITÀ
DEGLI STUDI
DI PADOVA

CONCLUSIONS

THE COHORT OF ELDERLY POOR RESPONDER PATIENTS ASKING FOR AUTOLOGOUS IVF WILL INCREASE IN THE NEXT FUTURE DUE TO

- **THE EXPECTED INCREASING POPULAR TREND OF DELAYING FIRST PREGNANCIES**
- **THE PERSISTENCE OF LEGAL, POLITICAL, CULTURAL AND RELIGIOUS BARRIERS TO OOCYTE DONATION, (IN SOME COUNTRIES IS STILL UNAVAILABLE)**

THE INTRODUCTION OF **S-SCF ASSAY IN THE ROUTINE MANAGEMENT OF ELDERLY POOR RESPONDER PATIENTS MAY CONTRIBUTE TO **SOLVE THE DILEMMA OF WHETHER TO CANCEL OR CARRY ON THE STIMULATION CYCLE****

THIS IS CRUCIAL TO SAVE THE COUPLE AN UNNECESSARY FINANCIAL AND EMOTIONAL BURDEN
